

## PROFILE

---

**Henning Larsen Architects is an international architecture company with strong Scandinavian roots. Our goal is to create vibrant, sustainable buildings that reach beyond themselves and become of durable value to the user and to the society and culture that they are built into.**

Since the company was founded in 1959, we have acquired a comprehensive knowledge of the many aspects of building - from sketch proposals to detailed design, building owner consulting and construction management. Our competences are continuously developed through our close collaboration with global partners, experts and specialists.

We shape, challenge and change the physical environment – from masterplans, urban spaces and buildings to interior design, components and strategic design – with the overall objective of providing the user with a strong, visionary and thoroughly prepared design adapted to the specific context.

Henning Larsen Architects attaches great importance to designing environmentally friendly and integrated, energy-efficient solutions. Our projects are characterised by a high degree of social responsibility – not only in relation to materials and production but also as regards good, social and community-creating spaces.

Our ideas are developed in close collaboration with the client, users and partners in order to achieve long-lasting buildings and reduced life-cycle costs. This value-based approach is the key to our designs of numerous building projects around the world - from complex masterplans to successful architectural landmarks.
